at 11:00 am**

Mr. Tom Ganfield of Maxitrol will be on site to talk about the complete line of Maxitrol regulators. Learn about Maxitrol's newest products and take advantage of special offers for training attendees.

High Capacity Regulator— This is the highest capacity regulator Maxitrol has ever produced. The new 325-7AL is a line pressure regulator that offers a capacity of **1.25 million Btu/hr.** It can be used in a wider range of applications, and is available with the new vent limiting device.

IMBLUE Technology— Available on request, IMBLUE increases corrosion resistance and protection against the elements for regulators in outdoor applications, especially in coastal regions where salt air causes rapid corrosion.

vLimiter— Available for the new high capacity 325-7AL regulator, eliminates the need to run expensive vent piping to the outside. In the event of a rupture, gas escapement is limited to within ANSI standard requirements. Item #12A49 for use with the 325-7AL regulator.

vProtector — Designed to block the vent opening of the regulator from dirt, insects, snow, or ice that can cause unsatisfactory regulator performance. Item #13A25 for use with the 325-7AL regulator.
